Swiss Rarities Committee seasonal criteria for submission

In addition to the species and subspecies listed overleaf, every species or subspecies not yet seen in Switzerland in the wild must be submitted to the Swiss Rarities Committee with a full description, as well as first breeding records. The Swiss Rarities Committee also examines reports of commoner species seen at unusual dates or locations. The periods during which submission is required have been fixed for each species (except sedentary species) and are listed below. Generally speaking, the particular species has never, or only very rarely, been observed during the given period. A few species (Greater Scaup, Whiskered Tern and White-winged Tern) are not unusual during the given period but their identification is not straightforward.
